EDUCATION

University at Buffalo

Buffalo, NY

Master of Science in Computer Science

Aug 2024 – Dec 2025

- Relevant Coursework: Operating Systems, Algorithm Analysis & Design, Machine Learning, Deep Learning, Computer Vision, Image Processing

University of Mumbai

Mumbai, India

Bachelor of Science in Information Technology

Aug 2019 – Apr 2022

- Relevant Coursework: Python, Object-Oriented Programming, Database Management Systems, Data Structures & Algorithms, Java, C/C++, Full-Stack Development, Statistics, Software Engineering

EXPERIENCE

Saayam For All

Mar 2026 – Present

Full Stack Developer

San Jose, California (Remote)

- Architected and deployed 5+ cloud-native microservices using Python and Go within AWS ECS Fargate, reducing p95 backend processing latency by 20% (from 380ms to 304ms) through Kafka-backed distributed messaging queues.
- Constructed modular interfaces using React and React Native, driving a 25% increase in component reusability and slashing frontend release cycles by 15% via multi-step registration wizards and streamlined cross-platform API integrations.
- Orchestrated serverless backend solutions using AWS Lambda and Cognito, and refactored a legacy onboarding flow with scroll-depth validation that unblocked a 5-month product bottleneck to ensure 100% legal compliance.
- Built CloudWatch observability dashboards and executed security audits to migrate hardcoded API secrets into decoupled environment variables, slashing system downtime by 15% and neutralizing repository vulnerability vectors.

Ipsos Market Research

Nov 2022 – May 2024

Software Engineer

Mumbai, India

- Designed Python-based backend services and scalable ETL pipelines handling 100K+ records weekly, implementing strict schema validation and error-handling logic that boosted target data quality metrics by 40%.
- Optimized complex relational schemas, SQL queries, and PostgreSQL database configurations, reducing average heavy query processing execution times by 35% across 250+ global survey systems.
- Built robust Selenium automation testing frameworks and reusable modular utilities, reducing manual QA regression effort by 30% and accelerating critical project delivery timelines by 2 weeks.
- Collaborated on containerizing legacy Python services using Docker, improving local development consistency and accelerating deployment cycles across staging environments.

Kiya.ai

Jun 2022 – Aug 2022

Data Analytics Intern

Navi Mumbai, India

- Developed and optimized Python ETL data pipelines utilizing Pandas and NumPy, reducing incoming data anomalies by 45% and integrating clean datasets into interactive Tableau KPI dashboards for executive stakeholders.
- Managed data integrity across development sandboxes, writing system processing logs to reduce pipeline review times.

TECHNICAL SKILLS

Languages & Frameworks: Python, TypeScript, JavaScript, Go, C#, SQL, Bash, FastAPI, Django, Flask, Node.js

AI & GenAI: OpenAI API, Anthropic API (Claude), LangChain, LlamaIndex, Hugging Face, PyTorch, Scikit-learn, Pandas, NumPy

Cloud & Infrastructure: AWS (Lambda, ECS Fargate, EC2, S3, API Gateway, SQS, Bedrock, SageMaker), Azure, GCP, Docker, Kubernetes, Terraform, GitHub Actions

Data & Databases: PostgreSQL, MySQL, Redis, Elasticsearch, Databricks

Frontend: React, HTML5, CSS3, Responsive UI Design

ACADEMIC PROJECTS

Study With Me – Intelligent Dev Platform | *Django, Python, PostgreSQL, REST Framework*

Mar 2026

- Engineered a Discord-like communication platform using Django, implementing a customized User Model and multi-table database schema with full CRUD capabilities for topic-based chat rooms and message threads.
- Integrated Django REST Framework (DRF) to build robust API endpoints, while developing a dynamic global search engine and real-time activity feed that boosted user content discoverability and navigation efficiency.

Automated Time-Table Generator | *Django, Python, REST APIs, PostgreSQL*

Dec 2025

- Built a Django-based automated scheduling platform featuring a custom modular optimization engine, successfully resolving complex scheduling constraints and eliminating 100% of potential room/resource clashes.
- Implemented Role-Based Access Control (RBAC) and secure RESTful APIs to facilitate multi-user timetable management, ensuring absolute data isolation and reducing API response latency during concurrent CRUD operations.

Handwriting Recognition for Accessibility | *Python, PyTorch, CNN, CRNN, Transformers*

July 2025

- Designed and trained a multi-architecture deep learning pipeline (CNN, CRNN, and Transformers) for handwriting-to-text recognition, achieving 91% validation accuracy to improve digital accessibility for neurodiverse users.
- Implemented Grad-CAM interpretability visualizations to surface model attention patterns, while benchmarking all three architectures across latency and generalization metrics to optimize production model selection.

CERTIFICATIONS

Generative AI with Large Language Models | *DeepLearning.AI & Amazon Web Services*

June 2026

Claude with Amazon Bedrock | *Anthropic Academy & AWS*

Apr 2026

The Complete Full-Stack Web Development Bootcamp | *Udemy (Angela Yu)*

Dec 2025
