EDUCATION

University at Buffalo

Master of Science in Computer Science

Aug 2024 – Jan 2026

Buffalo, NY

- Relevant Coursework: Machine Learning, Deep Learning, Computer Vision & Image Processing, Pattern Recognition, Operating Systems, Algorithm Analysis & Design, Data Intensive Computing

University of Mumbai

Bachelor of Science in Information Technology

Aug 2019 – Apr 2022

Mumbai, India

- Relevant Coursework: Python, Java, C/C++, Object Oriented Programming, Data Structures & Algorithms, Database Management Systems, Full Stack Development, Statistics, Software Engineering

EXPERIENCE

Saayam For All

Full Stack Developer

Mar 2026 – Present

San Jose, CA (Remote)

- Built and deployed 3 cloud-native microservices in Python on AWS ECS Fargate, using asynchronous Kafka message queues to decouple services and reduce backend p95 latency by 20% (380ms to 304ms).
- Built the multi-step Volunteer Onboarding Wizard frontend in React and TypeScript, managing multi-stage registration state with session persistence and fallback error handling, increasing component reusability by 25%.
- Refactored Redux state selectors to bind authenticated user identifiers across onboarding stages, eliminating redundant AWS Amplify authentication calls.
- Engineered secure RESTful APIs and serverless validation pipelines using AWS Lambda, API Gateway, and Cognito, refactoring legacy onboarding workflows to reduce manual verification effort by 34%.
- Authored API specifications covering endpoints, request/response schemas, and validation rules for cross-functional backend handoff.

Ipsos Market Research

Software Engineer

Nov 2022 – May 2024

Mumbai, India

- Developed scalable Python backend services and automated ETL pipelines processing 100K+ weekly survey records, enforcing data contract schemas and sanitization rules that reduced ingestion errors by 40%.
- Optimized PostgreSQL relational schemas, execution plans, and composite indexes across 250+ production databases, cutting average query execution time by 35% under concurrent traffic.
- Built automated testing frameworks using Selenium and PyTest within Git CI pipelines, cutting regression testing cycles by 30%.
- Containerized multi-service Python applications with Docker to maintain environment parity across staging and production, partnering with cross-functional teams in Agile sprints and conducting code reviews.

Kiya.ai

Data Analytics Intern

Jun 2022 – Aug 2022

Navi Mumbai, India

- Conducted exploratory data analysis and iterative feature selection on raw financial records, developing Python ETL pipelines with Pandas and NumPy that reduced data anomalies by 45% and boosted baseline model performance by 20%.
- Transformed processed datasets into interactive executive KPI dashboards using Tableau, Matplotlib, and Seaborn, delivering data driven visual summaries that optimized strategic stakeholder reporting cycles.

PROJECTS

HANA: RAG-Powered Portfolio Assistant | *Python, LangChain, pgvector, Anthropic API*

Jul 2026

- Engineered a retrieval augmented generation pipeline for a personal portfolio chatbot, chunking and embedding project and career documents into a pgvector database and retrieving relevant context at query time to ground Claude API responses, replacing a static hardcoded system prompt with dynamic, source-grounded answer generation.

SmartWardrobe: AI-Driven Digital Closet & Outfit Stylist | *React, Supabase, Gemini API, Cloudinary AI*

Apr 2026

- Developed a full stack digital wardrobe web application with automated image processing via Cloudinary AI to extract and categorize garments with zero hosting overhead, and integrated the Gemini API to orchestrate an intelligent styling recommendation engine that analyzes local weather data and user calendar schedules to dynamically generate personalized outfit combinations.

Automated Time-Table Generator | *Django, Python, REST APIs, PostgreSQL*

Jan 2026

- Built a Django based automated scheduling platform with a custom backtracking optimization engine that resolves room and resource scheduling constraints.
- Implemented Role Based Access Control and secure RESTful APIs for multi user timetable management, reducing API response latency during concurrent CRUD operations.

Handwriting Recognition for Accessibility | *Python, PyTorch, CNN, CRNN, Transformers*

Oct 2025

- Designed and trained a multi architecture deep learning pipeline (CNN, CRNN, and Transformers) with data augmentation, label smoothing, and AdamW optimization, achieving 91% validation accuracy for handwriting to text recognition.
- Implemented Grad-CAM interpretability visualizations to surface model attention patterns and benchmark the three architectures across latency and generalization metrics for dyslexic and neurodiverse users.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C, C++, SQL

AI & GenAI: Pandas, NumPy, PyTorch, TensorFlow, Keras, Scikit-learn, PySpark, LangChain, Hugging Face, CNNs, Transformers, LLMs, Retrieval-Augmented Generation (RAG), OpenAI API, Anthropic API (Claude)

Cloud & Infrs: AWS, Kubernetes, Docker, Kafka (MSK), Git, CI/CD

Data & Frameworks: Django, FastAPI, Flask, Node.js, React, PostgreSQL, MySQL, Tableau

CERTIFICATIONS

Generative AI with Large Language Models | DeepLearning.AI & Amazon Web Services – June 2026

Claude with Amazon Bedrock | Anthropic Academy & AWS – Apr 2026

The Complete Full-Stack Web Development Bootcamp | Udemy (Angela Yu) – Dec 2025
